REPUBLIC OF RWANDA

3 0 Dec 2019 Kigali, on..... Ref <u>1526</u> /16.03

MINISTRY OF ENVIRONMENT P.O. BOX 3502 KIGALI

To: Mr. Stephen Rodriques Resident Representative UNDP

Dear Sir;

Subject: Submission of the Q4 narrative report

I am pleased to submit the Quarter four (Q4) narrative report for the project Strengthening Capacities for Environment and Natural Resources (SCENR) for your consideration.

This report details the activities undertaken during the period starting from October to December 2019.

We thank you for your continued support and collaboration

Results-based Reporting

OUTPUT 1:ENR sector capacities enhanced to optimize and scale-up sustainable and climate resilient management of natural capital resources

Results achieved and evidence (*Explain the achievements at the output level. Make sure to provide evidence, related data and how it was collected*):

The program is aiming at improving the planning and coordination of the Environment and Natural Resources Sector. During this quarter (October –December 2019) the Ministry focused on the preparation of the Backward Looking Joint Sector Review meeting.

Completed activities that contributed to the above achievements (Explain which activities took place and how they contributed to the achievement of the output. Photos or reports can be added as annex):

Activity 1.1 Carry out Joint Sector Reviews

In line with effective coordination of the Backward Looking Joint Sector Review (BLJSR) Meeting, the project staff together with the planning unit of the MoE updated the Terms of References for the Thematic Working Group which guided all the seven sub sectors (Forests, Meteorology, Environment and Climate Change, Land, Mining, Petroleum & Gas and Integrated Water Resources Management and Climate finance) under the Environment and Natural Resources sector to carry out meaningful discussions that informed the Joint Sector Review (JSR) Report. The Thematic Working Groups for all Subsectors were carried out in the Month of September and ended by 18thOctober 2019 while the JSR meeting took place on 28thOctober 2019.

As per terms of reference circulated by the Ministry of Finance and Economic Planning the BLJSR focused on the following objectives:

- i. To assess progress in achieving sector objectives with focus on 2018/19 targets for: NST1 sector performance indicators and their corresponding policy actions. This has also included discussion on catch up plans for areas lagging behind.
- ii. To present and discuss budget execution performance for 2018/19.
- iii. To highlight priority areas (maximum of five) for the 2020/21 fiscal year that will inform the planning and budgeting process for institutions in the sector.
- iv. To review progress against implementation of recommendations from the last JSR meetings

The meeting highlighted the notable achievements of the Sector including the national forest coverage of 30.4%; private sector involvement in public forest management (10 companies have been given 18,241.7 Ha) and also 3,000 hectares of degraded watersheds rehabilitated (Nyabugogo, Muvumba, Sebeya and upper Nyabarongo catchments). It also emphasised on the mainstreaming of National Determined Contributions(NDCs) by all sectors as key driver towards Green Economy.

The Backward Looking Joint Sector Review Meeting concluded with some key recommendations that will help in improving the coordination of ENR Sector:

- 1. Use NDCs as a checklist to mainstream sustainable principles across all sectors
- 2. The Ministry should organize other stakeholders (CSOs and Private Sector) to have a joint planning and reporting and also to help CSOs to be organized under Forums
- 3. The Ministry should put in place a mechanism to map all financial resources mobilized across Ministry and agencies.

Change in plan (what results were not achieved as planned and why) :

Reporting on the operationalization of the Environment and Natural Resources Results Based Monitoring and Evaluation System.

Due to insufficient funds during the year 2019, some activities related to Environment and Natural Resources Results Based Monitoring and Evaluation (ENR RBM&E) have been postponed to next year 2020. Those activities are :

- Strengthen and Operationalize the ENR sector RBM&E system with technical assistance to manage and trouble shoot the RBM system
- Capacity building on general RBM and use of system for effective reporting
- Conduct 1 baseline study for the RBM&E system. During the previous mission carried out by NIRAS NATURA in line with Establishing Results Based Monitoring and Evaluation System some baseline studies were identified and these include :
 - 1) Ecosystems level of degradation study,
 - 2) Hazardous/toxic waste study,
 - 3) Water Productivity study,
 - 4) Forest Enterprises survey,
 - 5) Mining sites and processors assessment.

Further steps starting by January 2020, Environment and Natural Resources Sector stakeholders will update the above list of identified baseline studies and from there terms of reference of priority studies will be drafted.

Overall Challenges, Recommendations and Lessons learnt

Raise any challenges that require attention, and lessons learnt / best practices that can be shared within the project and with other projects.

| Limited funds has hindered some activities especially on RBM & E system High staff turnover at district level(the ones who were trained on the use of the ENR RBM & E system left and being replaced by | We need to plan ahead for better results and prioritize the activitie based on available budget. Information on the available fund should be provided by UNDP ahead of time. Capacity building of staff at |
|--|--|
| new ones) | District level on the use of the E RBM&E System. |

The Results Based Monitoring and Evaluation System (RBM&E) using DHIS2, one of the lessons learnt is that a **large number of staff need to be trained** to 1st of all run smoothly the system but also compensate for and deal with staff turnover in districts.

Regarding the operationalization of the system, The Ministry needs to **do awareness on the importance and use of ENR RBM & E system through** a lot of trainings at both levels (District & National) and enforcement strategy should be in place so that people can report through the system regularly.

Lesson learnt from the customization of the ENR RBM & E system is that the ENR RBME indicators are **flexible** and can be revised based on justifiable reasons. We have also to keep in mind that revised indicators should always be aligned to the National Strategy for Transformation, ENR SSP and other new policies.

LNOB & Gender: (Share any achievements or lessons learnt, good practices on LNOB and gender equality and women's empowerment)

During the implementation of the activities we are aiming to improve the extent to which the project implementation reporting is informed by a thorough understanding of gender roles, power relations and a disaggregation of women's and men's specific interests, needs, and priorities.

Disaggregated data is still a challenge that needs to be addressed. The Environment and Natural Resources Sector has commissioned a consultancy to develop Sector Gender mainstreaming assessment and gender mainstreaming Strategy. During the assessment some weaknesses have been identified in having disaggregated data in subsectors and inadequate budgeting for disaggregated ENR gender sensitive interventions. The Strategy will come up with key strategies and indicators to guide the gender mainstreaming in the Environment and Natural Resources Sector.

Copy the table below and repeat for each project output.

OUTPUT 2: Green Growth and Climate Resilience Strategy implemented in selected sectors

Results achieved and evidence (Explain the achievements at the output level. Make sure to provide evidence, related data and how it was collected):

In October 2018 the Ministry of Environment with the support from United Nations for Development Program (UNDP) carried out the evaluation of the implementation of the Green Growth and Climate Resilient Strategy (GGCRS).

The objective of the evaluation was to assess achievements as well as challenges encountered and lessons learned during implementation from its launch in 2011 until 2018 as EDPRS 2 was concluding. The evaluation has confirmed that the GGCRS is still highly relevant to Rwanda's long term Vision 2020/2050,Sustainable Development Goals (SDGs),agenda 2030 on sustainable development and National Strategy for Transformation (NST-1) for 2018 to 2024.

Indications of relevance as discussed are highlighted by the enabling pillars/priorities that have been put in place for the implementation. The Strategy also gives opportunities for forging regional and international partnerships in climate action such as the Kigali Amendment of Montreal Protocol and National Determined Contributions (NDC) Partnership.

However, the evaluation revealed that there is a need for revision of the GGCRS for making clearer the indicators and targets for some of the policy actions.

The main objective of this consultancy is to revise and update the Rwanda's Green Growth and Climate Resilience Strategy to capture emerging / potential future trends and respond to multiple scenarios for achieving a Green Economy, with a clear framework of its implementation.

The International Lead Consultant, in collaboration with a national consulting firm, will support the Ministry of Environment and stakeholders to enrich research and studies on emerging trends, build future scenarios using foresight methodology, and identify and document resilient strategies to facilitate actions toward the preferred scenarios.

1. The Ministry of Environment commissioned SMEC to develop wetlands master plan in the City of Kigali with main purpose of sustainably managing and utilising its wetland system. This includes the wetland boundaries and developing an appropriate form of storing the wetland coordinates in such a way that satellite monitoring can be done. In addition to that more detailed studies on the urban wetland hydrology, ecosystems, land use, socio economic analysis and other relevant data and information on urban wetlands have been carried out. The final report of the Wetland Master plan was validated.

2. NIRDA hired an Indian company named Council of Scientific &Industrial Research-Central leather Research Institute (CSIR-CLRI) that supported NIRDA in conducting a detailed project report on Development of Leather value chain in Rwanda and also conducted clean technologies related to leather sector. Good ideas were suggested on green technology of leather processing and waste management.

Completed activities that contributed to the above achievements (Explain which activities took place and how they contributed to the achievement of the output. Photos or reports can be added as annex):

Activity 2.1 Review the Green Growth and Climate Resilience Strategy (GGCRS) with stakeholders using foresight methods

Regarding Output 2 related to Green Growth and Climate Resilience Strategy implemented in selected sectors a number of activities were planned and significant progress was made during the quarter four of 2019.

During the quarter four, The Ministry through UNDP advertised a tender aiming of revising the Green Growth and Climate Resilience strategy. The main objective of this consultancy is to revise and update the Rwanda's Green Growth and Climate Resilience Strategy to capture emerging / potential future trends and respond to multiple scenarios for achieving a Green Economy, with a clear framework of its implementation with stakeholders using foresight method. So far the International Consultant has been hired and is on board since November 2019 and he submitted the inception report. The National Firm have been hired and will undertake the assignment early January 2020.

- 1. The inception highlighted that the foresight workshop will be carried out before January 31st,2020
- 2. Scenario narrative will be validated before March 31st, 2020
- 3. Draft revised GGCRS will be available before June 30th , 2020
- 4. Sector costing for GGCRS will be available before September 30, 2020

Activity 2.2 Develop a Master plan for Wetlands Management in Kigali City, including categorization of wetlands, management plan of specific wetlands and resource mobilization for further implementation

Develop a Master plan for Wetlands Management in Kigali City, including categorization of wetlands, management plan of specific wetlands and resource mobilization for further implementation. The final report was submitted and has been reviewed by a quality assurance team. The report reveals that Wetlands in the City of Kigali have undergone significant transformation mainly through agricultural activities that have drained wetlands and replaced wetland plants with crop plants. Other impactful human activities include infrastructural developments (e.g. buildings, roads) within wetland boundaries and the extraction of clay for brick making. These

changes can be reversed through ecological rehabilitation.

Activity 2.4 Capacity building of NIRDA to strengthen the green technology research and setting up of the Environment and Climate Change Innovation Centre

During this quarter NIRDA (National Industrial Research & development Agency) contracted Council of Scientific &Industrial Research-Central leather Research institute (CSIR-CLRI) since 29th July 2019in supporting the growth transformation of Leather Value Chain in Rwanda. The Final report was submitted and validated.

The main objectives of this assignment were (i) conducting a study and preparation of a Roadmap for the development of Leather Value Chain in Rwanda (ii) demonstration of open-source cleaner technologies and organizing a workshop on Best Available Cleaner Technologies (BACTs) and (iii) providing recommendations for the establishment of leather-park.

Some of the recommendations include :

- Salt free preservation system for curing of hides
- Enzyme assisted hair saving unhairing methodology
- Lime liquor recycling
- Water conservation and recycling wherever possible
- Pickle free Waterless Chrome Tanning technology
- Optimization of chemicals usage
- Avoidance of objectionable and toxic chemical substances in accordance with the
- international standards
- Occupational Health and Safety (OSH) aspects
- Adopt standards for greener and cleaner leather manufacture.
- Labeling of finished leather for traceability requirement of western market

Change in plan (what results were not achieved as planned and why):

Overall Challenges, Recommendations and Lessons learnt

Raise any challenges that require attention, and lessons learnt / best practices that can be shared within the project and with other projects.

| Key challenges and risks, recommendation recommended solutions): | s (Identify challenges and risks and |
|--|---|
| Lessons learned and/or good practices: | |
| During the implementation of the Project it has services on time is very important. It will be very | |

implementing partners to have refresher courses in procurement and also using the E- Procurement. Planning the tenders ahead of time is also of paramount.

LNOB & Gender: (Share any achievements or lessons learnt, good practices on LNOB and gender equality and women's empowerment)

During the implementation of the activities we are aiming at improving the extent to which the project implementation reporting is informed by a thorough understanding of gender roles, power relations and a disaggregation of women's and men's specific interests, needs, and priorities.

Results Framework Summary
