ATTACHMENT-1

TOWARDS INDUSTRIAL SYMBIOSIS IN ISKENDERUN BAY AREA PROJECT

PROJECT DOCUMENT REVISIONS

Page3: Section II – Strategy: Paragraph 1 (ORIGINAL TEXT)

"Implementation of an IS programme in the Iskenderun Bay is of particular importance due to a set of reasons. As a start, the region is already experiencing serious environmental and social stress due to the extent and nature of industrial activity. With projected expansions of the industrial base, this situation is likely to worsen. There appears to be a will both from private and public parties to improve resource use efficiency and thereby improve both economic, social and environmental performance, but there is little clarity on the effective ways of achieving such results. On the other hand, both the existing diversity of economic activities of the region and the nature of projected new developments illuminate sizeable potential for efficiency gains through collective action. Such collective action, on the other hand, appears unlikely to happen in the short run, without the canalization effect of a dedicated body. The timing for such catalysation is right for Iskenderun Bay and this project aims to initiate this practice."

The timing for such catalysation is right for Iskenderun Bay and this project aims to initiate this practice."

Page3: Section II – Strategy: Paragraph 2 (ORIGINAL TEXT)

"Social stress also presents non-technical risks for investors in the region. Poor environmental management and its consequent social impacts on livelihoods as well as poor management of social impacts of operations (i.e. employment, local procurement, corporate responsibility) is highly risky for sound business environment and sustainability of operations. Thus it is also desirable for investors to develop benchmarks and collaboration towards sustainable business."

Environmental problems and their social impacts on livelihoods (i.e. employment, local procurement, corporate responsibility) might be risky for sound business environment and sustainability of operations. Thus it is also desirable for investors to develop benchmarks and collaboration towards sustainable business."

Page3: Section II – Strategy: Paragraph 3 (ORIGINAL TEXT)

"UNDP was the implementing agency of the project of "Integrating Sustainable Development Principles into sectoral policies", while SPO was the executing partner of the project. The project overall objective was to integrate sustainable development principles into sectoral policies. Four sectors were analyzed and strategies were proposed. These sectors were: energy, urbanization, agriculture and science & technology. There are ongoing capacity building activities supported by Millennium Development Goals Fund – "MDG F 1680 Enhancing the Capacity of Turkey to Adapt to Climate Change" project focusing on the improvement of the negotiation skills of the Government of Turkey to participate in the international climate change negotiations. The project also aims to develop capacity for managing climate change risks to rural and coastal development in Turkey. This will be achieved by mainstreaming climate change adaptation into the national development framework, building capacity in national and regional institutions, piloting community-based adaptation projects in the Seyhan River Basin, and integrating climate change adaptation into all UN agencies in Turkey. Furthermore, UNDP Turkey also helped Turkey to develop projects in the area of

energy efficiency in industry, building and appliances. Other areas of intervention of UNDP Turkey in the field of environments are biodiversity, land degradation, organic farming and access to clean water.”
