ANNUAL WORK PLAN 2019

Country: Viet Nam

Project Title:

Energy Efficiency Improvement in Commercial and High-Rise

Residential Buildings in Viet Nam

UN One Plan III Focus

area(s):

Focus area 1: Inclusive, Equitable and Sustainable Growth

Expected OP

Outcome(s)/Indicator(s):

Outcome 1.3: By 2016, key national and sub-national agencies, in partnership with the private sector and communities, have established and monitor multi-sectoral strategies, mechanisms and resources to support implementation of relevant multilateral agreements and effectively address climate change adaptation,

mitigation and disaster risk management

Outcome Indicator 1: CO2 emissions, total, per capita and per

\$1 GDP (PPP)

Expected OP Output(s) and Indicator(s):

<u>Output 1.3.3:</u> A national system for Reduced Emissions from Deforestation and forest Degradation (REDD), and Nationally Appropriate Mitigation Actions (NAMAs) for a number of strategically chosen sectors and localities are formulated and operationalized with clear potential benefits

Output Indicator 1: Number of sub-sectors/ cities/ towns/ provinces with NAMAs developed and submitted to an

international register

Implementing Entity:

Ministry of Construction (MOC)

Brief Description

The Project has the goal to reduce intensity of GHG emissions from the building sector in Viet Nam. The project objective is to improve the energy utilization performance of commercial and high-rise residential buildings in Ho Chi Minh and Hanoi. Realization of this objective will be achieved through implementation of three components (1) Improvement and Enforcement of Energy Efficiency Building Code; (2) Building Market Development Support Initiatives, and (3) Building EE Technology Applications and Replications. Each component comprises a number of complementary activities designed to remove barriers to the stringent enforcement of the revised EEBC, and to the greater uptake of building energy efficiency technologies, systems, and practices in commercial and residential buildings. By EOP, the GEF investment will have catalysed direct GHG emission reduction of about 37,680 tCO2e. The cumulative direct reduction in GHG emissions over the lifetime of the project is envisioned to be 236,382 t CO2e.

Brief Summary of the AWP 2019

This is the forth year of the project implementation with intensive activities implemented and key outputs expected to be delivered. Overall, the 2019 annual work plan aims at providing Ministry of Construction and related beneficiaries with technical assistance in (i) improvement of the policy framework for application of the revised energy efficiency building code QCVN 09:2017/BXD through development of testing standards and norms; (ii) delivery of in-depth training to building practitioners in energy efficiency in buildings; (iii) development of guidelines for design of energy efficiency and beyond code buildings and (iv) energy efficient measures applied to selected buildings.

Expected Results

- At least 05 standards related to EE properties of building materials are developed and submitted for review and approval;
- Specific energy consumption profiles (SEC) and related national energy consumption benchmarks will be determined for 5 typologies of buildings in 2 climate zones as a result of analysed energy consumption survey data;
- An EE labeling scheme for building in operation will be defined and tested.
- Building energy consumption M&V scheme and Information Disclosure programme will be established.
- At least 04 technical training courses organized for at least 100 beneficiaries;
- Technical support is provided to 07 selected new and at least 07 existing buildings;
- EE design and beyond code guidelines is drafted and consulted;
- Key lessons are recorded and shared nationwide.
