UNDP EEG and GEF

Simplified Project Implementation Review (PIR) / Final Project Report Template
For Individual SLM MSPs under LDC-SIDS Global Targeted Portfolio Project
Reporting Period: between 1 July 2011 and 30 June 2012, and also since the project inception

1. Basic Project Data

ì	Official Project Title: Capacity Building for Sustainable Land Management
	Official Project Title. Capacity Building for Sustainable Build Management
	** N

Project Summary (as in PIMS and Project Document): Land degradation in Burundi is caused by factors including deforestation (resulting from the depletion of wood resources, forest clearing for agriculture, poor management of forest resources, and poor land use), land scarcity, overgrazing, and climatic disturbances. This situation is related to the present state of poverty and the overall well-being of the population. Its persistence will continue to limit socio-economic growth as well as increase the threat of food insecurity. In order to lift these barriers to development, Burundi needs to develop the capacity to identify gaps and develop strategies that are related to sustainable land management, as well as effectively coordinate their implementation. The aim of this project is to ensure that land management is mainstreamed into the problematic of sustainable development by means of local and national capacity building, It is hoped that results obtained will slow down and reduce the negative effects of land degradation. Its general objective is to contribute to the development and sustainable land management in Burundi. More specifically, it is designed to strengthen the enabling environment that is necessary for the successful implementation of sustainable land management. This project is submitted under the LDC-SIDS Portfolio Project for Sustainable Land Management and will help achieve the objectives of Operational Programme 15 and Strategic Priority 1 related to Targeted Capacity Building for sustainable land management. The project's four key expected outcomes are: capacity of communities and institutions in the area of land management strengthened; land degradation issues mainstreamed into policies and programs for poverty reduction and sustainable development; a Med-Term Investment and Resource Mobilization Plan for sustainable land management implemented; and a functional management unit and adaptive lessons implemented. The activities will be carried out over three years, using a participatory approach, and the project beneficiaries include government structures, agencies, community groups, NGOs, and communities in general.

Country: Burundi	PIMS Number	3380	
•	Atlas Project Number	00047515	

Project Timeframe:

This is the final Project Implementation Review (PIR) for all MSPs under the LDC-SIDS Global Targeted Portfolio Project. The MSPs under this Portfolio are therefore expected to be operationally closed by December 2012. Before this deadline, each MSP is responsible for completing and covering the cost of an individual (or group¹) terminal evaluation.

A. Is the Terminal Evaluation Completed?	YES		NO		B. Is the Project Operationally Closed?	YES		NO	
If yes, when?				7.535	If yes, when?				
If no, when it is planned to be completed? Must be before Dec 2012	D	ecem	ecember 2012		If no, when it is planned to be closed? Must be before Dec 2012	December 2012			2

¹ For those projects which have delivered less than 40% of their project budgets by June 2012 will go through a group terminal evaluation process unless justified otherwise. They will be asked to share the cost of the evaluation process. Specific details of this process will be communicated to the projects in due course.

Outcome 2:	
Sustainable lar	nd
management	
mainstreamed	into
development	
policies	

2.1. Partnerships built to ensure SLM mainstreaming into all sectors is established and operational/ Environmental issues are not considered in ministry policies and programs other than those specifically dealing with the environment 2.2. SLM is mainstreamed into the legal framework by developing applicable texts for the various sectors (e.g. agriculture, land tenure) and into sectoral policies and development programs/ Legal texts are either nonexistent or not applied. There is no policy to integrate land management into sectoral programs. SLM factors are not systematically taken into account in the development

of programs.

2.3. Knowledge about SLM is shared among the various stakeholders/ No effective public awareness raising activities on SLM exist.

Land Management issues are now considered in sectoral policies and programs (Human settlement, Urbanization, Infrastructures, Agriculture, etc.).

The Law was revised, translated, under dissemination and is being implemented. Stakeholders and public awareness has been raised with the support of media and communication tools produced and still being produced (short film, sketches, radio and TV spots, meetings/trainings and workshops.

Land Management issues are now considered in sectoral policies and programs (Human settlement, Urbanization, Infrastructures, Agriculture, etc.).

The Law was revised, translated, under dissemination and is being implemented.

Stakeholders and public awareness has been raised with the support of media and communication tools produced and still being produced (short film, sketches, radio and TV spots, meetings/trainings and workshops.

Outcome 3: Medium-Term Investment Plan for Sustainable Land Management implemented

3.1. An Investment Plan and its Resource Mobilization is used in NAP implementation/ Weak funding allocation by the government for interventions to combat land degradation. 3.2. A partnership framework is established between the government, communities, and donors for implementation of the Medium Term Investment Plan and Resource Mobilization/ Decentralized planning and resource efforts have never taken place in the country. Programs, and projects related to land management are not accompanied by a prioritization mechanism and a finance system.

The NAP was revised and aligned with the SLM national Strategy and Land Management revised Law, the Investment Strategy and Plan are being finalized for Gov Cabinet adoption and a partners meeting for funding is still to be organized

The NAP was revised and aligned the SLM national Strategy and Land Management revised Law, the Investment Strategy and Plan is being finalized for Gov Cabinet adoption and a partners meeting for funding is still to be organized

Outcome 4:
Implementation of a
functional
management unit and
adaptive lessons
learned

- 4.1. A system to monitor and evaluate the NAP implementation and Investment Plan developed and implemented/ No existing investment plan.
- 4.2. Effective management for outcomes has been set up/ No activities in progress 4.2. Project work plan implemented/ No activities in progress.
- 4.3. Lessons learned are collected and disseminated/ No activities in progress

Annual work plans were approved and ASL released regularly. The Technical committee meetings were held on a quarterly basis or as needed, while the steering committee meetings were held on a semester basis. Meetings reports are available and filed in appropriate files.

Two project audits were done and audits follow plans elaborated and executed

However, the midterm evaluation was not organized. But the Final evaluation is being prepared (ToRs elaborated and the recruitment process is being prepared. The Final evaluation report is expected to be finalized by September 2012. Lessons learned are still to be disseminated.

However, the midterm evaluation was not organized. But the Final evaluation is being prepared (ToRs elaborated and the recruitment process is being prepared. The Final evaluation report is expected to be finalized by September 2012.

Lessons learned are still to be

disseminated.
A non cost extension up to May 2013 has been requested to allow a smooth termination of the project, as its implementation was somehow delayed due to the fact was a victim of a heart attack. The Burundi Government expects that UNDP/FEM will allow the non cost extension.
Activities to be finalized include the Investment strategy and Plan process and funding, finalization of communication and trainings tools, collection and

dissemination of lessons learnt

Rating of Project Progress:

Level/Position	2011 Rating	2012 Rating ⁽²⁾	Overall Rating ⁽³⁾	Comments (Please comment on the rating for 2012 and review and reflect on progress since the project inception)
National Project Manager/Coordinator	MS	S	S	Efforts were made in 2012 by the Government of Burundi and UNDP CO to ensure improvement in the attainment of results.
UNDP Country Office/ Programme Officer	MS	S	S	The project implementation was delayed due to 2 factors: the coordinator's health (after a heart attack) and the lack of a close follow up by the responsible government unit. Early in the year, UNDP brought the situation to the attention of the Minister who took some decisions that considerably improved the implementation of the project's activities: the project's national director was requested to suspend all missions outside the country, and the national coordinator's contract was not renewed as of June 2012. Half time contracts were offered the job of project implementation support consultants. A contract was offered to a university research center to finalize the Investment Strategy and Plan, to ensure the adoption process by the Cabinet and organize a meeting with partners and donors for its funding. **Additional:** Number of field visits by the CO staff during the PIR year—Jul 11-Jun 12: 0
UNDP Regional Centre/ Technical Advisor	MS	S	S	Having just inherited this project, my assessment is based solely on the content reported in this PIR. From the report in table 1 the project appears to have made satisfactory progress in mainstreaming SLM policy and capacity building. In addition, both the government and UNDP country office seem to have given the idea of continuity of the initiatives post project a great deal, and have made appropriate arrangements for sustaining the impacts – in particular the hiring of the research center to finalize the IFS for presentation to cabinet. This will be an important legacy for the project. The no cost extension requested (to May 2013) seems reasonable and is hereby recommended. The project has made notable impacts on the policy level, which is impressive; in particular three key outputs are: • Cost of inaction against land degradation • National Strategy and Action Plan t for Sustainable land management (SLM) • Investment strategy and Financing Plan for SLM (Draft being finalized for adoption & implementation) **Additional:** Number of visits to the project by RTA during the PIR year –Jul 11-Jun 12: Description D

(1) Please recall the rating of the project for 2011

(2) Please rate the project progress as per the following nomenclature:

(3) Please use the same rating scale used in (2) to rate the overall project progress as it is the final project report

Highly Satisfactory (HS)	Implementation of all components is in substantial compliance with the original/formally revised implementation plan for the project. The project can be presented as "good practice".		
Satisfactory (S)	Implementation of most components is in substantial compliance with the original/formally-revised plan except for only a few which are subject to remedial action. Implementation of some components is in substantial compliance with the original/formally-revised plan with some components requiring remedial action.		
Marginally Satisfactory (MS)			
Marginally Unsatisfactory (MU)	Implementation of some components is not in substantial compliance with the original/formally-revised plan with most components requiring remedial action.		
Unsatisfactory (U)	Implementation of most components is not in substantial compliance with the original/formally-revised plan.		
Highly Unsatisfactory (HU)	Implementation of none of the components is in substantial compliance with the original/formally-revised plan.		

3. Adjustments to Project Timeframe (accumulative)

If the duration of the project or the project work schedule has been adjusted since project approval please explain the changes and the reasons for these changes.

Change	Reason for Change	Scope of delay (in months)
A one year non cost extension has been requested (up to 31 may 2013)	1. Health problem of the National Coordinator (Heart attack during the project implementation period) 2. To allow the attainment of key results like the finalization, adoption and funding of the investment strategy and plan, the finalization of important training and communication tools on SLM, and support to the newly created dialogue framework on SLM issues.	12 months

4. Financial Information: cumulative since project started to 30 June 2010
