

Tbilisi, 13 June, 2014

Dear Mr. Tagauri,

I am pleased to submit Final Narrative and Financial reports for operationally and financially completed project "Integrated Socio-Economic Development of Pankisi Valley" (Project ID: 00077091). According to the cost-sharing agreement with SDC, Pankisi project (00077091) was supposed to end on 30-Nov-2012. However, as communicated to you earlier, some of the commitments were carried over to January 2013 and therefore, reporting period extends to 31-Jan-2013.

As you will see from the financial report, balance of 168.77USD from SDC contribution was left unutilized. Please provide relevant bank details, so that we transfer the balance. Or alternatively, if you instruct us, we can rephase the balance to UNDP program fund and use it for other development projects.

Let me take this opportunity to thank you for the continued support to our program.

Sophie Kemkhadze

Deputy Resident Representative a.i.

Sincerely

Mr. Beka Tagauri Senior National Program Officer Swiss Agency for Development and Cooperation

Swiss Agency for Development and Cooperation SDC

FINAL NARRATIVE REPORT

PROJECT (00077091): INTEGRATED SOCIO-ECONOMIC DEVELOPMENT OF PANKISI VALLEY

Period: 1-Feb-2011 to 31-Jan-2013

Introducion

The objective of the project is to ensure integrated local development for the Pankisi Valley and to improve the lives of the local population through enhanced employment and self-employment opportunities, better provision of social services and safe and secure environment.

The Output: Increased productivity and incomes of the farmers in Pankisi Valley as a result of support for cattle production and marketing.

Target group: The target group will be small and medium sized farmers, especially with the focus on smallholders with 2-10 cows and/or up to 30 breeding ewes.

Interventions will be in the following areas:

- Improving efficiency of primary production;
- Developing productive infrastructure and services for the dairy processing in the Valley;
- Developing producers' and service providers' awareness of, and capacity to respond to market and processing opportunities; and
- Better producer prices and services to farmers through joint actions through farmers' groups.

The project is organized around the following major components:

- 1. Assessment of agriculture potential and market development needs:
- 2. Development of local farmers' production capability through provision of agriculture extension services;
- 3. Increasing efficiency of animal husbandry;
- 4. Facilitating creation and development of farmers' associations, and
- 5. Development of a small dairy processing plant.

With the course of 2011- 31.01.2013 the project has performed all the target activities: the agriculture extension services, vocational courses, support to animal health through local veterinarians association, fiduciary funds (merged grant and demonstration projects' scheme), as well as development of the milk processing facilities and supply chain was developed. The study on Animal Husbandry in Akhmeta Municipality was performed that provides the situation analysis and the vision and recommendations for the further stages of support.

1. Assessment of Agriculture Potential and Market Development Needs

During 2011 preliminary assessment of agriculture sector was performed by the project team. The primary data on animal husbandry and vegetables growing was collected in cooperation with local

administrative units and existing market channels for meat and dairy products (wholesale and retail) was investigated. Based on this assessment the priority dimensions and the scope for thorough study was identified and relevant Terms of Reference developed for national consultant in agriculture. The process of primary data collection and research needs' and new processing and affiliated to it infrastructure and service development needs' identification.

Relevant technical calculations and feasibility study for the dairy plant, milk collection system and animal husbandry supporting service system were developed. During the course of these investigations the project team decided to include only national consultants in the agriculture sector related study and divert the funds envisaged for international consultants toward the non-study related programmatic activities, to make the costs structure of the project budget more effective taking into consideration that the research needs identified during the project clearly showed necessity of concentration of the study primarily on animal-husbandry and affiliated value chains and relevant products market channels.

During the course of 2011 the terms of reference was developed for consultant who determined the main objective of the study as 'receiving clear and detailed picture on the leading agriculture sector in the region - animal husbandry'.

The major tasks for the consultant were the following:

- 1. Collecting primary data;
- 2. Review agricultural sector-animal husbandry;
- 3. Develop a value chain analysis and identify bottle necks;
- 4. Study market channels accessibility;
- 5. Making analysis of animal feeding, animal buildings, animal breeding, animal health;
- 6. Identify intervention strategies and missing linkages.

The national consultant has performed the 'Animal Husbandry sector Study in Akhmeta Municipality', which was implemented on participatory approach and contains analysis of the existing situation in the whole municipality with description of various interest groups of farmers, their needs and recommendation for increasing efficiency of animal husbandry to help local population to increase live conditions and income generation.

The discussions of the results of the study were held with the extension centers' client farmers, the municipality and based on which the recommendations for new demonstration projects also serve for developing and designing further stages of the animal husbandry sector's development.

2. Development of Local Farmers' Production Capability through Provision of Agriculture Extension Services

Agriculture Extension Centre's Services. The overall objective of the Agriculture Extension Center is to facilitate farmers' access to market, production, post-harvest handling and management information necessary for sound policy, investment, and operational decision-making which would eventually have beneficial poverty impacts.

The Extension Centre's field offices, both in Akhmeta (office space is allocated in UNDP office in Akhmeta) and Pankisi Gorge (Duisi village) are fully equipped for delivery of group and individual sessions and trainings.

The organized system for tracking farmers' performance (extension clients) is introduced. The Farmers' Card format was developed to track the main indicators of farms' productivity and efficiency regularly and assess the effect of extension center's services on effectiveness and efficiency of farms.

In 2011 a wide outreach campaign was performed to inform and attract many farmers for Extension Services through outreach agents who worked on delivery of information in the whole Akhmeta Municipality. A special leaflet in Georgian and Russian languages (2,500 pcs) and the posters in Georgian

and Russian languages (50 pcs) were printed and disseminated. Distribution of the leaflets and informing of the population was performed by the outreach officers and community trustees.

Based on the Farmers' Card counting 156 permanent and 80 associate members enrolled, the farmers' consultation groups were formed for the following areas: animal husbandry, veterinary, field crop growing, artificial insemination, vegetable growing and mechanization.

In total 334 group and 101 individual farmer consultations, 116 consultations at farmers' premises were held at farmers spots were held in 2011 and 2012 (please see the tables below).

Breakdown of Extension Sessions 2011

Mechanization	
TOTAL	16

The demonstration projects are implemented based on pre-defined regulations and agreement with farmers. The purpose of the demonstration projects is to:

- Support application of new technologies at farms and provision of information and demonstration services to the farmers' community.
- Provide support to farmers in advancing their farms' effectiveness and efficiency through intensive post-testing support to larger groups in application of these demonstration projects, using fiduciary funds.

The regulations determine the farmers' eligibility criteria for demonstration projects, process of the support to be provided by the Extension Centre to farmers and liabilities of the beneficiaries.

The eligible farmers could choose preferable types of the projects, offered among the number of template projects based on the advice of the Extension Centre's consultants. The farmers were coached by the consultants during the implementation of the demonstration projects and were requested to provide some in-kind or financial contribution. The implementation of demonstration projects has dual effect: teaching and awareness raising and investment factor for raising effectiveness of farming. The implementation is monitored regularly, based on a schedule by an invited consultant, local consultant, coordinator of the Extension Center and the business consultant. The details are presented in the Annex 1.

3. Increasing efficiency of the animal husbandry practice

Provision of vocational retraining for local farmers

Outreach. The following activities were implemented for informing the population regarding vocational retraining courses:

- a) Rolling text-line announcement regarding vocational retraining courses was made 50 times a day during 1 week through Telavi TV, and 40 times a day during 1 week through Akhmeta TV;
- b) Text announcements were made through Telavi TV 5 times a day during 1 week;
- c) Posters were produced (100 pcs in Georgian and 50 pcs in Russian) and posted at visible places in Akhmeta and villages;
- d) The community mobilization specialists informed the population with the leaflets on vocational retraining courses.

Vocational Retraining Courses 2011

Name of the vocational retraining course	Place of conducting the course	Number of groups	Number of members	Number of women
Animal husbandry specialist	Akhmeta, UNDP office	1	11	9 women
Animal husbandry specialist	Village Duisi, Pankisi	1	13	3 women
Cheese maker	Akhmeta, Dairy plant	3	34	28 women
Veterinary nurse	Akhmeta, UNDP office	1	12	4 women
Plant grower	Akhmeta, UNDP office	1	12	9 women
Total		7	82	53 women

Vocational Retraining Courses 2012

Name of the vocational retraining course	Place of conducting the course	Number of groups	Number of members	Number of women
Animal husbandry specialist	Akhmeta, UNDP office	131	10	4 women
Cheese maker	Akhmeta, Dairy plant	2	30	15 women
Veterinary nurse	Akhmeta, UNDP office	1	3	2 women
Veterinary nurse	Village Duisi, Pankisi valley	1	1	1 women
Plant grower	Akhmeta, UNDP office	1	14	10 women
Total		6	58	32 women

All the graduates of the re-training courses are currently self-employed and exercise the acquired advanced knowledge in running their husbandries successfully. In addition, 23 of them got jobs: 14 individuals became vets and vet nurses, 3 - consultants in animal husbandry, plant growing and veterinary, 2 lab specialists, 1 processing engineer, 1 cheese master, 1 driver-distributor and 1 security serviceman.

4. Developing capacities of the local units of the National Food Agency

Program for developing veterinary in the Akhmeta Municipality was developed in 2011. Basic principles of the private veterinary service were developed and agreed upon with veterinarians of the Akhmeta Municipality.

In order to implement this component successfully, the veterinary instruments (veterinary tools and diagnostic means) have been purchased by the project.

Office for Veterinarians Association was repaired in the building of Akhmeta Municipality Administration Building. The room housed first veterinary association in Georgia to be created in the project framework.

Within the project, the Akhmeta Veterinary Association has been established.

On 31st August, 2011 UNDP and Akhmeta Veterinary Association organized a conference on the topic "Supporting the development of Veterinary in the Akhmeta Municipality". The conference was attended by the officials from the National Food Agency and Local Government as well as by the scientists and representatives of international organizations.

The agreement between the UNDP and the Akhmeta Veterinary Association was signed on 1st September, 2011. UNDP agreed to support the Akhmeta Veterinary Association in developing the private veterinary sector.

From September, 2011 Akhmeta Veterinary Association members were distributing the specially-developed brochures among the residents of Akhmeta Municipality to inform them about the implementation of the Veterinary Development Program.

From September, 2011 the survey of Farmers in Akhmeta Municipality has started to identify the existing conditions in animal husbandry as well as the farmer's approach to preventive veterinary. At present, 1236 farmers are surveyed and 2650 cattle are registered with them.

From December, 2011 the contracts were signed between the Akhmeta Veterinary Association and the farmers in order the preventive veterinary measures to be taken on 4 diseases (Siberian Ulcer, Emkari, Turkish, pasterela).

The Veterinary Association performed wide outreach campaign and obtained preliminary contracts with the population during December 2011 – February 2012 on the vaccination of cows against 4 kinds of diseases, which would cost 11 GEL per head through advance cash payment to the bank account of the Vet Association. Without preliminary contracting it would cost 3 GEL per disease up to the same 11 GEL in total through internal cash payment receipt on the spot.

The vaccination started in March 2012, in which 14 association vets were involved; as a result 19,221 GEL was accumulated on the Vet Association's bank account. **The details are presented in the Annex 2**).

Provision of artificial insemination services to local farmers

Artificial insemination program for the farmers of Akhmeta Municipality was developed. Specifications of the equipment, tools and other means required for conducting of artificial insemination were identified.

Within the project artificial insemination equipment has been purchased. The five artificial insemination centers are established (2 of them are in Pankisi).

Preliminary polling of farmers was performed by community mobilization specialists in order to identify their attitude to artificial insemination.

6 veterinarians participating in the program took special course in artificial insemination and received certificates.

In 2011, 8 farmers benefited from services of artificial insemination (AI), among which 1 successful case was registered. The method which was used under the project was based on natural fertility processes and not on its artificial acceleration which makes impossible to control the demand for the AI services and leaves it fully on natural processes, which explains less cases as compared to planned number of cases. Mainly the cattle under indoor feeding are subject to AI, and the farmers having their cattle within herd with the potential inseminator bulls for free grazing are reluctant to agree on AI, though a persuasive work is carried out among them. In 2012, 18 attempts of AI were made, 9 attempts succeeded, of which 3 calves were born, aging now 3-4 months and above with good health condition.

Fiduciary funds

The grants' scheme which was envisaged under the fiduciary funds was merged with demonstration projects scheme by means of which farmers could select any of 20 template projects and through cofinancing implement a demonstration project under close guidance of the extension center's consultants. The template projects were developed by extension center's consultants (in animal husbandry and business consultants) and the fiduciary funds were provided to the selected farmers – best beneficiaries of extension services (for more details please see the section 2 'Increasing efficiency of the animal husbandry practice'.

5. Development of a small dairy processing plant

Project has developed milk processing infrastructure accessible for local producers of raw milk. The plant purchases milk from local farmers and produces 5 types of dairy product: 4 types of cheese and 'Nadughi'. The operation of the plant stimulates local demand for raw milk, a very common product of local farmers, supporting increase of the total volume of monetary incomes and also its share in total incomes in the beneficiary farms from 30% to 50%.

The building of the Milk Processing Plant "Delamo" is located in Akhmeta, close to the Pankisi Valley. The Plant is equipped with the modern machinery and is dealing with the full cycle of milk processing.

The process of developing Cheese Plant.

The business plan and feasibility study on dairy processing plant was developed in 2011 and negotiations with local municipality was launched on the best option for location of the plant as a result of which Akhmeta Municipality allocated a building and plot of land.

Topo-geodesic, geology and sustainability study of the building, along with projecting and cost calculation were performed before starting its reconstruction-construction works.

Specifications of the dairy plant equipment were elaborated in cooperation with an international consultant.

After studying sustainability of the building owned by the municipality, its roof, belt and part of the walls were dismantled.

Construction Company performed reconstruction/construction works taking into consideration specifics of the milk processing technology. Separate electric line was led to the building, independent water supply and sewage systems were arranged.

Additional space of 25 sq. m. was constructed next to the main building of 120 sq. m. totaling in space of 145 sq. m.

The dairy plant was provided with up-to-date equipment and laboratory devices. Milk processing equipment was installed by the foreign specialists – mechanics.

Operations of the plant.

The Plant functions based on the business plan and the food safety manual drafted within the project. The capacity of the Plant is 0.5-1.0 tons of milk per day. The Plant is supplied by around 60 households through 3 milk collection centers 2 of them locating in Pankisi Valley (Duisi and Matani villages) and making up 55% of total milk supplier households. These farmers provide milk regularly and they profit from it. The milk collection centers are equipped with all the equipment necessary for milk quality control. 7 individuals are employed in the plant. 5 of them are the graduates of the re-training courses in Cheese Craftsman conducted within the project, who currently work as the processing engineer, cheese master, lab specialist, driver-distributor and the security serviceman.

The plant sells the products produced during the teaching process: Nadughi, cottage cheese and 5 sorts of cheese (Tushuri, Guda, Georgian cheese, Sulguni and Imeruli). Among these products Guda and Tushuri (produced at plant) are new products on the Georgian cheese market. The recipes of these cheeses represent modernized products but based on old methods of traditional cheese making. This approach is beneficial in marketing terms as it has created a new product on the market which is strongly based on traditional methods of cheese making in Georgia.

The main partners of the plant are the hypermarket "Good Will" – popular trade chains. The products are sold also in several high-status supermarkets in Telavi. A negotiation is held with the hypermarket "Carrefour"; presumably a contract will be concluded with it on supply of dairy products. The Commercial Director of "Carrefour" visited the "Delamo" Plant and gave high appraisal to it and the products. With its product quality and price, "Delamo" entered to the prime segment of the market. The plant focuses on the quality of product and thus sale prices correspond to them.

There is a big demand on the Cheese Craftsman courses under 'Delamo' - 5 groups of adults with 64 students have already been re-trained, 86% of which are certified. The professional re-training courses are provided by the Telavi Professional College "Prestizhi".

Agreement with the Ministry of Education and Sciences has been reached on conducting of the state budget-funded cheese-craftsman courses on the premises of the plant.

Milk Purchased by Years

	Total, 2011-2012/2013(January)	186,759

Total revenues of the plant form the sales make up 186,759 GEL; accounts receivable – 38000 GEL; Finished products in stock – 23000 GEL; Accounts balance – 32,841 GEL.

Use of incomes from dairy products sales - Reinvestment to Sustainability. The business plan developed by the project team for the 'Delamo' plant envisages the management, financial and marketing plan and financial forecasts enabling proper management of the plant in the long-run. The target profit rate, which is calculated per types of products, varies from 15% to 20% of the total per unit costs. By the end of the project the savings were used for ensuring operational sustainability of the plant within the improved animal husbandry environment, developed network of milk collection centers, consolidators of local farmers' milk and their providers to the plant.

The incomes of the plant were used for supporting the vocational retraining courses provided to local farmers and reinvested into purchase of raw materials for supporting sustainability of the plant. In 2011 the supporting costs for vocational retraining were spent by Telavi Vocational College 'Prestizhi'. In 2011 the revenues of the plant, apart from support to the vocational courses, were saved for 2012 and for further operational support of the plant, meaning purchase of inputs - raw milk, etc.

In light of above said, the total expenditures of the plant making up 116,458 GEL for 2012, were spent on raw materials and operation - 93,170 GEL, on salaries – 10,076 GEL, on demonstration projects – 13,212 GEL.

Quality Assurance System

"Delamo" has obtained the Certificate of Compliance for all the products produced. The quality control is exercised on the finished product on its way of production from the very farmers' premises (among them is the laboratory one as well).

The clinical and laboratory examination is conducted on all the cows that provide the milk for the plant. In order to ensure the food safety and quality assurance in cheese production a special project is being implemented that aims the constant control of hygienic conditions of the milk supplied to the milk plant "Delamo".

The following activities are permanently conducted within the project:

Identifying the cows, the milk of which is supplied to the mini plant;

- Checking the identified cows against the tuberculosis;
- Checking identified cows against brucellosis (both in blood and milk);
- Identifying the mastitis in the milk;
- Identifying Somatic Cells in the milk;
- Defining the antibiotics in the milk;
- Bacteria in the milk.3

The lab formed within the project has checked 250 cows in farms that are supplying the milk against brucellosis and tuberculosis; all of those cows have been ear-marked. It resulted in identifying 45 cows infected with brucellosis (the appropriate measures have been taken). None of the cows were infected with tuberculosis.

20% of cases of mastitis were identified as a result of the regular 630 lab tests of the checked milk provider cows during 2 years.

Quality Control System of the milk in the plant:

Every day the milk supplied to the plant is checked against the following disease and parameters:

- Milk Acidity and Density;
- Fats and Proteins in the milk;
- Mastitis in the milk:
- Somatic Cells in the milk;
- Antibiotics in the milk:
- Bacteria in the milk

The finsihed products are lab-tested correspondingly.
