

Annex I PDNA Rollout Visibility

1. Third World Reconstruction Conference WRC3 Brussels, Belgium 6-8 June 2017

The third World Reconstruction Conference (WRC3) took place in Brussels from 6 to 8 June 2017 and was jointly organized by the European Commission (EC), the World Bank's Global Facility for Disaster Reduction and Recovery (WB/GFDRR), the United Nations Development Programme (UNDP) and the African, Caribbean and Pacific Group of States (ACP). More than 500 representatives from national and local governments, civil society, academia, private sector and international organizations from around the world participated.

As one of the co-organizers, UNDP substantively contributed to the WRC3. It participated to both the opening and closing high level ceremonies represented by the Director of the UNDP Brussels Office - Barbara Pesce Monteiro. It organized and/or co-organized two high level plenaries and 10 technical sessions out of a total of three plenaries and 23 technical sessions. Additionally, UNDP participated as panelist in three technical sessions organized by other partners and facilitated the contribution of several UN agencies to the conference.

The UNDP delegation was led by Jo Scheuer, and UNDP's contribution to the conference saw the engagement of several BPPS clusters as well as UNDP country offices - namely: Cabo Verde, Haiti, Myanmar, Nepal, Niger, and Rwanda.

The WRC3 provided an excellent opportunity for UNDP to showcase the existing partnership with the EU and the World Bank Global Facility for Disaster Risk Reduction (WB/GFDRR) and reinforce the relationship with the ACP.

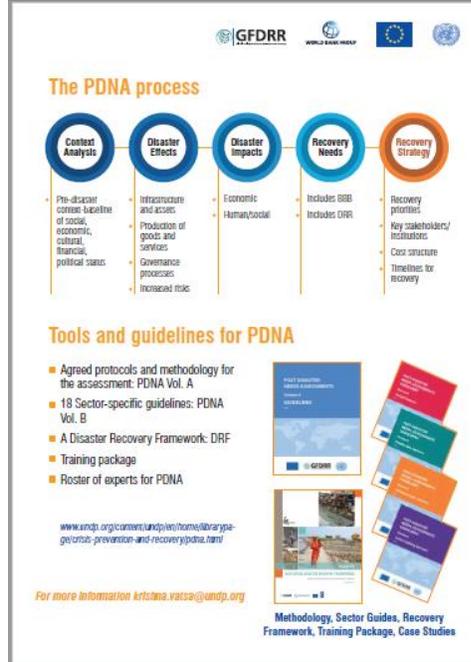

The PDNA rollout project was also promoted during this event through the distribution of promotional materials and other related information.

2. Knowledge and Promotional Products

PDNA on-line course
Available from November 2017

The banner features a photograph of a damaged building with a partially collapsed roof. Below the image, there are five icons representing the course modules: Module 1 (Overview and Protocols), Module 2 (Effects & Cost of the Effects), Module 3 (Socio-Economic Impact), Module 4 (Needs and Recovery Strategy), and Module 5 (Application of the methodology through a Case Study). Logos for GFDRR, UNDP, and the European Union are at the bottom.

The PDNA process

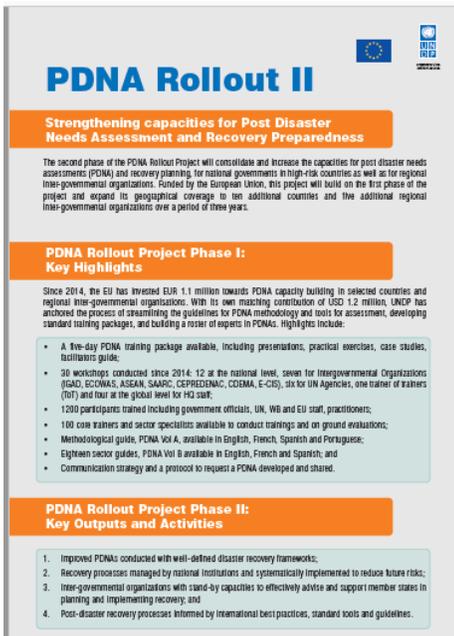

The process is shown as a linear flow through five stages: Context Analysis, Disaster Effects, Disaster Impacts, Recovery Needs, and Recovery Strategy. Each stage has associated sub-points: Context Analysis (Pre-disaster context, baseline of social, economic, cultural, financial, political states); Disaster Effects (Infrastructure and assets, Production of goods and services, Governance processes, Increased risk); Disaster Impacts (Economic, Human/social); Recovery Needs (Includes BBB, Includes DRF); Recovery Strategy (Recovery priorities, Key stakeholders/institutions, Cost structure, Timelines for recovery).

Tools and guidelines for PDNA

- Agreed protocols and methodology for the assessment: PDNA Vol. A
- 18 Sector-specific guidelines: PDNA Vol. B
- A Disaster Recovery Framework: DRF
- Training package
- Roster of experts for PDNA

Logos for GFDRR, UNDP, and the European Union are at the top. A URL and contact information are provided at the bottom.

Promotional material for the PDNA on line training

PDNA Rollout II

Strengthening capacities for Post Disaster Needs Assessment and Recovery Preparedness

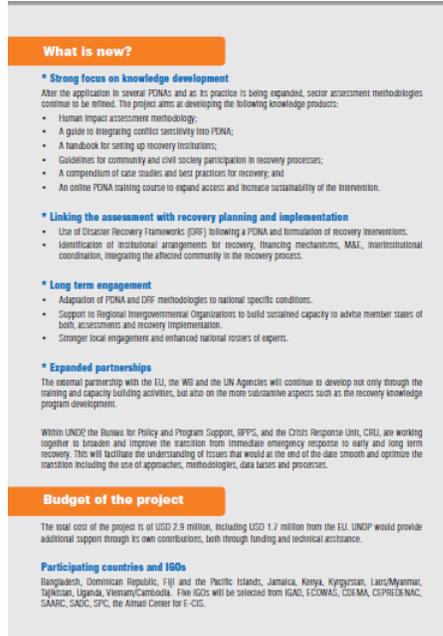

The second phase of the PDNA Rollout Project will consolidate and increase the capacities for post disaster needs assessments (PDNA) and recovery planning for national governments in high-risk countries as well as for regional inter-governmental organizations. Funded by the European Union, this project will build on the first phase of the project and expand its geographical coverage to ten additional countries and five additional regional inter-governmental organizations over a period of three years.

PDNA Rollout Project Phase I: Key Highlights

- A five-day PDNA training package available, including presentations, practical exercises, case studies, facilitators guide;
- 20 workshops conducted since 2014, 12 at the national level, seven for Intergovernmental Organizations (IGOs: ECOWAS, ASEAN, SADC, CEPREDENAC, CSDMA, E-CIS), six for UN Agencies, one trainer of trainers (ToT) and four at the global level for HQ staff;
- 1200 participants trained including government officials, UN, WB and EU staff, practitioners;
- 100 core trainers and sector specialists available to conduct trainings and on ground evaluations;
- Methodological guide, PDNA Vol A, available in English, French, Spanish and Portuguese;
- Eighteen sector guides, PDNA Vol B available in English, French and Spanish; and
- Communication strategy and a protocol to request a PDNA developed and shared.

PDNA Rollout Project Phase II: Key Outputs and Activities

- Improved PDNAs conducted with well-defined disaster recovery frameworks;
- Recovery processes managed by national institutions and systematically implemented to reduce future risks;
- Inter-governmental organizations with stand-by capacities to effectively advise and support member states in planning and implementing recovery; and
- Post-disaster recovery processes informed by international best practices, standard tools and guidelines.

What is new?

- Strong focus on knowledge development**
After the application in several PDNAs and as its practice is being expanded, sector assessment methodologies continue to be refined. The project aims at developing the following knowledge products:
 - Human impact assessment methodology;
 - A guide to integrating conflict sensitivity into PDNA;
 - A handbook for setting up recovery institutions;
 - Guidelines for community and civil society participation in recovery processes;
 - A compendium of case studies and best practices for recovery; and
 - An online PDNA training course to expand access and increase sustainability of the intervention.
- Linking the assessment with recovery planning and implementation**
 - Use of Disaster Recovery Frameworks (DRF) following a PDNA and formulation of recovery interventions;
 - Identification of institutional arrangements for recovery, financing mechanisms, M&I, interinstitutional coordination, integrating the affected community in the recovery process.
- Long term engagement**
 - Adaptation of PDNA and DRF methodologies to national specific conditions;
 - Support to Regional Intergovernmental Organizations to build sustained capacity to advise member states of both, assessments and recovery implementation;
 - Stronger local engagement and enhanced national rosters of experts.
- Expanded partnerships**
The external partnership with the EU, the WB and the UN Agencies will continue to develop not only through the training and capacity building activities, but also on the more substantive aspects such as the recovery knowledge program development.

Within UNDP the Bureau for Policy and Program Support, BPPS, and the Crisis Response Unit, CRU, are working together to broaden and improve the transition from immediate emergency response to early and long term recovery. This will facilitate the understanding of issues that would at the end of the day smooth and optimize the transition including the use of approaches, methodologies, data bases and processes.

Budget of the project

The total cost of the project is of USD 2.9 million, including USD 1.7 million from the EU. UNDP would provide additional support through its own contributions, both through funding and technical assistance.

Participating countries and IGOs
Bangladesh, Dominican Republic, Fiji and the Pacific Islands, Jamaica, Kenya, Kyrgyzstan, Laos/Myanmar, Tajikistan, Uganda, Vietnam/Cambodia. The IGOs will be selected from IGO, ECOWAS, ASEAN, CEPREDENAC, SADC, SAIG, OPC, the Almaty Center for E-CIS.

POST-DISASTER NEEDS ASSESSMENT

What is a PDNA?

A government-led exercise that provides information on the direct effects, intermediate and long-term impacts and recovery needs after a disaster. The economic value of damages, losses and needs are consolidated based on sectoral analysis, highlighting priorities for recovery of the most affected communities and geographical areas. Reports are prepared for each sector, which are consolidated into one report that explicitly highlights cross-cutting themes, such as gender, environment, livelihoods, governance and disaster risk reduction. The PDNA helps a country to assess the situation in a relatively short time, to quantify the needs and to formulate local recovery strategies.

40 PDNAs following disaster combined since 2008 across 40 countries

30 countries supported to develop disaster recovery strategies

- > 100 core PDNA reports and sector-specific reports from UN, IFC and UN and practitioners available in different regions and countries
- > 1000 practitioners and government officials trained to conduct PDNAs

Why is it important?

Disasters destroy public infrastructure, disrupt basic services and cause loss of lives and livelihoods. Countries facing recovery disasters invest significant resources to rebuild and restore livelihoods. However, in the urgency to respond to people's needs, resources for post-disaster recovery are often utilized without a thorough assessment of the impact of the disaster. This leads to locally conceived recovery plans that are not based on actual socio-economic needs and can result in narrowly focused programmes benefiting only some people and certain regions. An assessment can help to systematically understand the full extent of a disaster's impact on the affected areas and to comprehensively catalogue the needs and priorities of affected populations.

Multi-phased PDNAs – when government led and backed by national and local actors – by a strong foundation for recovery processes. A PDNA serves as a basis for developing disaster recovery frameworks and is a vital tool for mobilising the resources needed for recovery.

Government owned process

Following a disaster, a government can ask for a PDNA by requesting one of the three primary partners (the United Nations, World Bank and European Union) to assist in conducting the assessment. These three partners and other stakeholders offer technical support and facilitation, as determined and requested by the government.

Typically, the PDNA implementation is spearheaded by a relevant government ministry, while sector and line ministries join the process to assess their specific sectors. UN Resident Coordinators in country for UN Resident Coordinators, UN Country Offices and EU Delegations help facilitate government counterparts in the process. The PDNA report is approved by the government and its partners before its release.

What is assessed?

The economic value of damages, losses and needs in key sectors, and the macroeconomic and human impacts.

- SOCIAL:** Housing, Education, Health, and Culture
- INFRASTRUCTURE:** Water & Sanitation, Community Infrastructure, Transport, Telecommunications, Energy
- PRODUCTIVE:** Agriculture, Livestock, Fisheries and Forestry, Employment, Livelihoods and social protection, Commerce, Tourism, Manufacturing
- CROSS-CUTTING ISSUES:** Governance, Disaster Risk Reduction, Environment, Gender
- MACRO-ECONOMIC IMPACT:** GDP, Balance of payment, Fiscal impact
- HUMAN DEVELOPMENT IMPACT:** SDGs, Poverty, Human Development Index

Local participation and strong coordination underpin the PDNA process. It necessitates the involvement of a wide range of organizations, communities and individuals – from the affected populations themselves and national and local authorities to NGOs, donors, the international organizations, civil society groups and the private sector. PDNAs do not duplicate rapid humanitarian assessments that may have already taken place, rather the information and analysis gathered in early assessments is vital to tailoring the PDNA analysis.

Promotional material of the PDNA approach and methodology

The ILO Turin Centre's facilities

Located in an attractive park on the banks of the River Po, the Centre's campus provides a congenial environment in which to live and study.

- it contains 21 pavilions with fully equipped modern classrooms, conference halls and meeting rooms fitted out for multilingual simultaneous interpretation, a computer laboratory, and a computerized documentation centre linked to various data banks.
- The campus has 287 studybedrooms, all with private bathrooms, telephone and cable television. It also has:
 - a reception desk open 24 hours a day.

2. Press Releases

As part of the visibility mechanism used by our partners within the countries and the regions, press releases are usually send out to promote the exercise with government officials. Bellow an example from the recent PDNA/DRF training in Cambodia.
