

Project: Demonstrating and Promoting Best Techniques and Practices for Reducing Health-Care Waste to Avoid Environmental Releases of Dioxins and Mercury

UNDP Annual Portfolio Indicators

Please complete the cells with white background colour only.

UNDP will monitor the following portfolio level indicators on an annual basis. Please add cumulative progress since project start and then update each year.

Indicator	Cumulative result
Number of national overarching POPs or sector regulations adopted	6
Number of people trained in POPs management/alternatives.	1,500
(Note: Professional training is defined as corresponding to more than 1 day per person of training; if the training is shorter than one day)	
POPs chemicals disposed (in metric tonnes)	
POPs chemicals safeguarded (in metric tonnes)	

Indicator	Annual result
Annual reduction of unintentionally produced POPs released (in g I-TEQ/a)	7
Annual CO2 emissions avoided (in tons CO2)	
Number of people for which high risk of POPs exposure reduced	~ 3000: staff working at project's model facilities (both healthcare facilities and central treatment facilities). The project is working on a gender assessment which will also yield results with respect to the impact of surrounding communities and certain populations being exposed to healthcare waste risks and pollution outside of healthcare facilities. This assessment will yield more tangible results on the no. of people for which high risk of POPs exposure has been reduced.
