

Etosha gets new anti-poaching patrol facility

07 November 2017 | Environment

The poaching of rhinos and elephants Namibia is plagued with can negatively impact wildlife and may drive these magnificent animals into local extinction, environment minister Pohamba Shifeta says.

He made these remarks whilst officiating at the inauguration of new facilities of the Skerpioenbult Anti-Poaching Patrol Camp in the Etosha National Park over the weekend.

Rhinos and elephants, he said, are arguably the most significant animals and high value species, both ecologically and economically.

“Overall, wildlife is the driver of the tourism economy and tourism holds major socio-economic benefits for the country through employment creation, poverty alleviation and national development at large,” he explained.

All these benefits, Shifeta noted, are on the brink of collapse owing to the ongoing poaching in the country.

However, the minister took cognisance of a decline in poaching this year. He pointed out that 27 rhinos were poached this year, compared to 60 rhinos last year.

According to him, poachers killed 20 elephants in Namibia so far this year in comparison with 101 poached in 2016.

Shifeta indicated that with continued support from its partners, the government has committed significant resources and the deployment of security to the hotspot areas.

“The Skerpioenbult Anti-Poaching Patrol Camp is another step in the fight against poaching, and enables the deployment of anti-poaching personnel to this hotspot area,” the minister said.

Speaking at the same event, United Nations Development Programme (UNDP) resident representative, Anita Kiki Gbeho said over 20 000 elephants were reported poached on the African continent in 2013.

In 2015, poachers reportedly killed over 1 300 rhinos in Africa, she added.

There is a high concentration of rhinos in the Skerpioenbult area, and it is where the highest cases of rhino poaching were recorded for the past few years.

Yahoo Japan Corporation, one of the leading media houses in Japan, in March this year donated N\$5 million, through the Namibian Protected Areas System Strengthening (PASS) Project, to construct the patrol camp.

Anti-poaching personnel, consisting of MET officials, the police and defence force members, will be deployed to the camp for anti-poaching patrol purposes.
