

With new sectors and greenhouse gases added, and an ongoing focus on adaptation, Pakistan's updated NDC communicated their intention to set a cumulative cut of 50% of its projected emissions by 2030, with 15% from the country's own resources and 35% subject to international finance. To achieve this, Pakistan aims to shift to 60% renewable energy, and 30% electric vehicles by 2030 and to ban coal imports as well as to expand nature-based solutions. Photo: Shuja Hakim/UNDP Pakistan
