<b>Brief project description:</b> The Republic of Chad is land-locked climate is dominated by increasing aridification. As one of the world’s most vulnerable countries to the adverse effects of climate change, Chad is particularly affected by low yields and a decline in harvests, which are exacerbated by weak forecasting, preparedness, response and adaptation.  The Chad National Adaptation Plan Advancement Project is intended to integrate climate change adaptation into medium- and long-term planning and budgeting of climate-sensitive sectors. Under Component 1, including the development of an integrated information system and a climate and socioeconomic database, the project will support planning and decision-making based on scientific evidence. As a result, Chad will be endowed with a national		

framework able to produce forecasts and assess the vulnerability of production systems to the adverse effects of climate change.

Component 1 of the project contributes to activities under Component 2 focusing on strengthening institutional capacities required for the effective integration of climate change adaptation into planning and budgeting. These training programmes will support the identification and prioritisation of adaptation options, which will be subsequently integrated into sector and local planning and budgeting frameworks/processes. A monitoring and evaluation system will be developed to support the coordination of adaptation planning efforts at all levels, evaluate progress and identify lessons learnt. By developing climate and socioeconomic information systems and building the capacities of stakeholders, the project will strengthen Chad's forecasting efforts, preparedness and response while enhancing the effectiveness of existing adaptation efforts.
